Curriculum & Instruction

We trust that you enjoyed a restful Labor Day weekend. After the hustle and bustle that always accompanies the opening weeks of school, the academic year is getting into full swing. Please be sure to check PCR regularly to help ensure your student(s) academic success. If you have any trouble logging in, please contact Liv Gonzalez or Tim Flanagan. Please note: PCR will be updating its user interface in the coming weeks. When that happens, we will be providing training sessions, and will post other information here to help you adjust to any changes.

Here are a few examples of what's going on in classrooms this week:

Environmental Science students are beginning a project using mint, kale, lettuce and bell peppers to study the effects of organic farming versus conventional farming. Students in The Human Element in Sports are discussing the complicated legacy of Lance Armstrong. The Performing Arts Collaborative is reviewing scripts to use for the film portions of Cardinal Productions in the Spring. Chemistry classes will be examining combustion in the lab. English 10 students are continuing their exploration of tragic heroes by beginning to read Shakespeare’s Tragedy of Macbeth. And Human Geography classes are learning about the size and scope of the sugar industry, and its effects on human health.

We look forward to seeing all of our families at Back to School Night on Thursday. Have a great week!
